SUBSTANCE ABUSE AMONG COLLEGE STUDENTS

DATA PURPOSE

This data set is created to showcase substance abuse among college students relative to demographics, usage patterns, behavioral aspects, and potential correlations with academic performance or mental health. This data, when analyzed, can help identify trends, risk factors, and potential interventions to address substance abuse issues among college students.

DATA INFO

CONTENT:
Percentages representing the rate that specific college demographics are affected by substance abuse and which specific substances.

DATE CREATION RANGE:
1975-2019

SOURCE:

DATA PURPOSE

- Data from University of Michigan
- The data set will remain on Github but, given that it reflects a specific timeframe (1975-2019) consumers will presumably be looking for time from this data, and thus it not be a issue
- The dataframe could be updated and modified through the GitHub repository by any team members. Because it is a team project, only team members and the class staff should have access to the repository, however.

8 HUMAN RIGHTS PRINCIPLES

- Our project aligns with one of the fundamental aspects highlighted in the 8 Human Rights Principles by Berkman Klein
- Center: the Promotion of Human Values. This principle emphasizes that AI should ultimately enhance human life and contribute to our well-being. In a similar vein, our project delves into the utilization of a diverse set of substances among maturing adults, echoing the same essence of prioritizing human welfare and happiness.
